life is why®

Your hospital provides around-the-clock care for at-risk infants. Together, we can ensure when an infant is discharged, their family is equipped with the lifesaving skills of CPR and choking relief. The Infant CPR Anytime® Kit, with about 20 minutes of self-directed instruction, can help prepare families to react in the event of a respiratory or cardiac emergency. The American Heart Association would like to speak with you about including a CPR program for families as part of your discharge process.

For more information visit heart.org/cpranytime or call **1-877-AHA-4CPR** to speak with a Community CPR manager in your area.
