Suspected opioid poisoning
- Check for responsiveness.
- Shout for nearby help.
- Activate the emergency response system.
- Get naloxone and an AED if available.

Is the person breathing normally?

Prevent deterioration
- Tap and shout.
- Open the airway and reposition.
- Consider naloxone.
- Transport to the hospital.

Does the person have a pulse? (Assess for ≤10 seconds.)

Support ventilation
- Open the airway and reposition.
- Provide rescue breathing or a bag-mask device.
- Give naloxone.

Start CPR
- Use an AED.
- Consider naloxone.
- Refer to the BLS/Cardiac Arrest algorithm.

Ongoing assessment of responsiveness and breathing
